

Your Security Eyes: Leveraging Purpose-Built Sensors to Combat Cyber Threats

Himanshu Kathpal

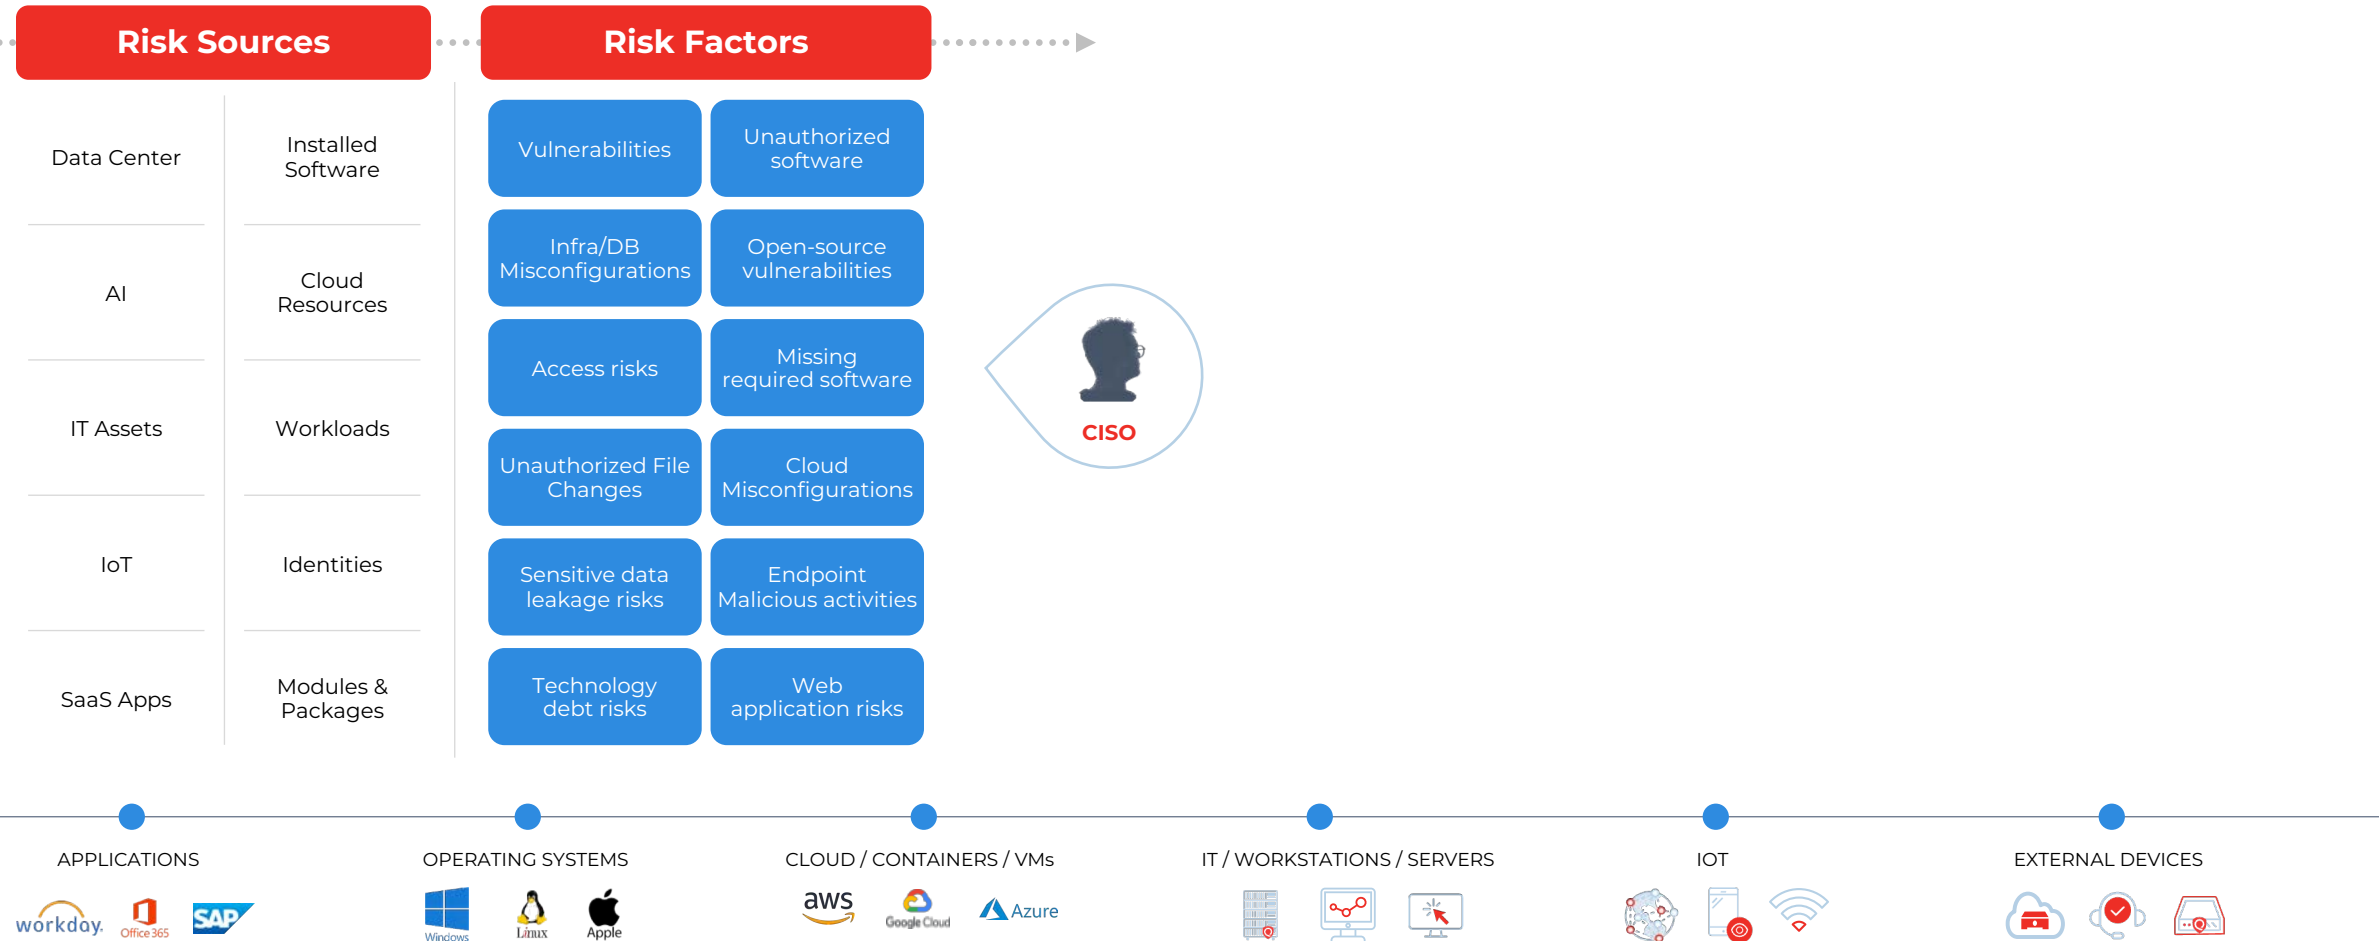

Senior Director, Product Management
Qualys Platform & Sensors

Your **Cybersecurity** program is ONLY as
accurate as the inventory you can **see**,
measure, manage and secure across your
hybrid environment!

DE-RISK YOUR BUSINESS

Expanding Attack Surface

Today's enterprise requires a wide range of sensors to secure sprawling environments

Customer Challenges

Reduce risk with an end-to-end approach for every environment

Uphill battle for security team to have attacker and defender's view!

Does my vendor provide sensors for ALL of my environment?

One size does not fit all, Comprehensive risk management is limited to only **63% of your assets** as Some vendors are Agent based, Some are Agentless, Some have partial coverage for specific environments excluding **exotic systems**.

How many agents I need to install for different use cases?

How many **subscriptions/agents do you have for VM, Config Assessment, Patch, FIM,, EDR, Cloud Security?** How can I install/push agents?

What about my legacy environment?

Organizations have **limited visibility into legacy O.S like Cent O.S 5, XP** but are used for **critical use cases like ATMs**, and most vendors have stop support for it.

Security silos, disparate & manual processes, cost for sensors

- Too **many vendors and tools**, inefficient **manual process** introduce significant burden.
- How much do you think you are paying for duplicate asset records? How much time does your team spend auditing?

DE-RISK YOUR BUSINESS

Must-Have for CISA

Scanners are MUST Have for 100% coverage for CISA

You are knowingly accepting the RISK for your org by not having ~100% CISA KEV coverage

We safeguard the enterprises with coverage for **1,174** out of **1,190** CVE items in the CISA KEV, amounting to **98.7%** coverage.

Our focus is on what matters most. The remaining 1.3% comprises predominantly vulnerabilities in outdated services, off-market, or minimal enterprise value products.

We set the industry standard with the **most comprehensive coverage of CISA KEV.**

20.64%

of CVEs are for actively exploited network and perimeter devices.

Augmenting Endpoint Agents based approach

Get Outside-in view

Vulnerability Detection and Assessment

Cyber risk: Limited visibility of remote-only and SSL-based vulnerabilities.

Digital Certificate Assessment

Cyber risk: Some certificates are not present in registry/system

De-Risk Dynamic Hybrid Environment

Cyber risk: Cloud environments often have blind spots, No coverage for network devices or firewall

CIS Benchmarking

Cyber risk: On average, 50% of CIS benchmark controls fail across CSPs.

DE-RISK YOUR BUSINESS

Qualys Cloud Agent

Quality, security, and safety

User Mode: VM, PC, SwCA, CAPS, CAR, Patch Management, and CSAM are developed in user mode; eliminating the risk of a Blue Screen of Death scenario.

Phased Deployment: Agent Binaries follow **ring deployment**, Automated checks are in place to **prevent malicious commands** like rm, kill, mv, etc.

Apps with Kernel Mode: Only for EDR and FIM running on Windows OS, Any driver changes are released as new Agent versions after being certified by Microsoft.

Qualys testing protocols include (Not limited to):

- Static code, memory leak and binary analysis of new features and changes.
- Driver load-unload tests on all supported Windows platforms.
- Performance impact assessments.
- Longevity and performance.
- WHQL Certification Test Suite.

Qualys Native Integrations for Unified SecOps Experience

Bridging IT &
security silos
to measure,
communicate
and eliminate risk

Asset Inventory

✓ Brings complete visibility into your managed and unmanaged assets

Real-time Monitoring

✓ Provides immediate threat detection and monitoring

Reporting and Ticketing

✓ Supports reporting and response management

Develop- Build-Deploy

✓ Shift left by streamlining development to be secure

Customer Benefits

Consolidation of Security tools with Qualys Sensors and how we do it better!

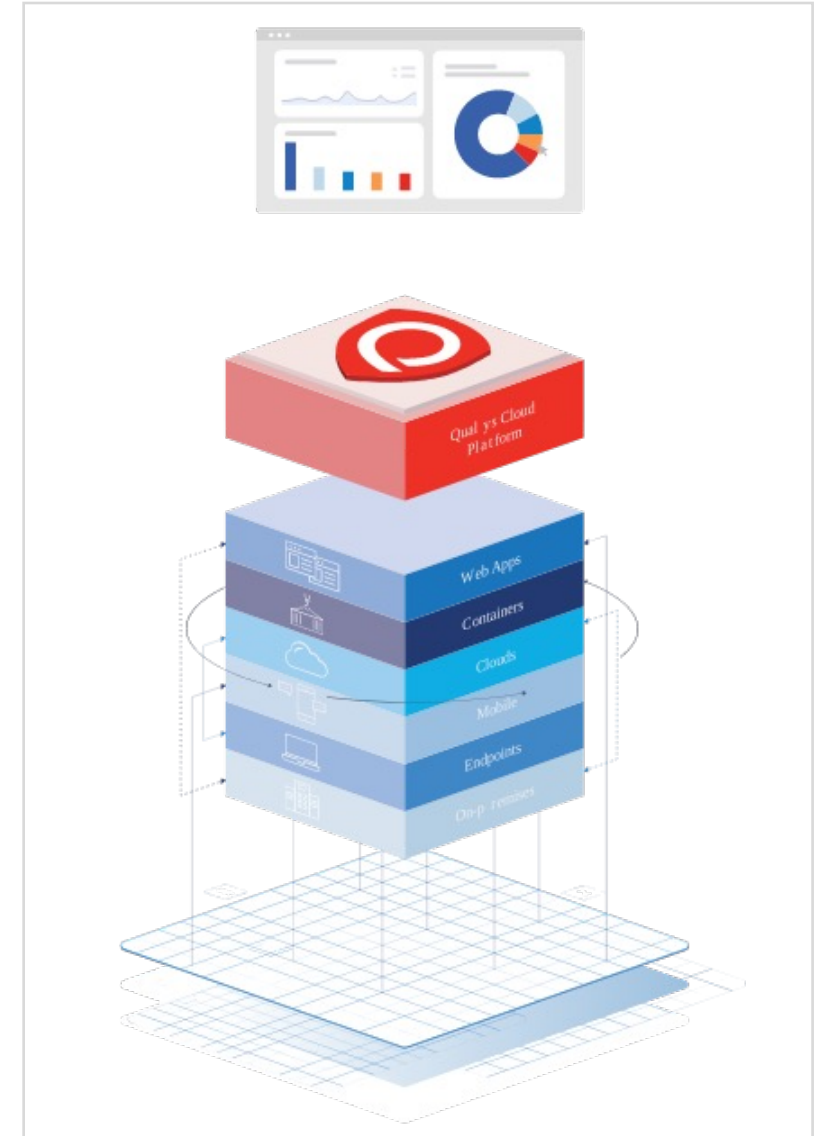

Unparalleled Visibility: Extend coverage for ALL of your environment, reduce risk from blind spots with industry's widest sensors feeding into a single pane of glass view across the infrastructure.

Reduce Total Cost of Ownership (TCO): By consolidating multiple siloed point products, Integrations and Operational Simplicity, Native Correlation eliminates manual work, Save more on computing.

Reduce Mean Time to Remediation (MTTR): Respond faster to threats with industry's widest coverage for devices.
