Qualys ETM Identity

Reduce your attack surface with unified platform for identity-first risk operations.

In a world where attackers don't break in, but log in, every login must earn its trust. Credentials now drive most breaches, amplified by AD and Entra ID misconfigurations, privilege sprawl, and stale accounts. While IAM solutions govern access, they don't measure identity posture or close the loop on risky configurations and toxic combinations, leaving security teams with siloed tools and alert fatigue. Simply said - identity is the new perimeter and without posture management, enterprises remain blind to the most exploited identity attack paths.

Introducing Qualys ETM Identity

Built into Qualys Enterprise TruRisk™ Management (ETM) platform, **Qualys ETM Identity** unifies identity risks associated with human and machine identities to prioritize and close the most exploitable attack paths first with consolidated identity telemetry, identity & asset correlated risk insights, and closed-loop remediation.

Measure identity risks from unified identity inventory – excessive privilege detection and misconfigurations to toxic combinations, and hidden accounts across on-prem Active Directory, Entra ID, IDaaS/IdPs like Okta.

TruRisk

Communicate identity risks with a single TruRisk™ score by aggregating identity exposures into a per-identity score and correlating with asset risk to surface toxic combinations.

Eliminate identity risks with 200+ AD policy controls, script libraries, policy enforcement, MFA, patch/mitigate/isolate and remediation workflows with ServiceNow, JIRA tickets.
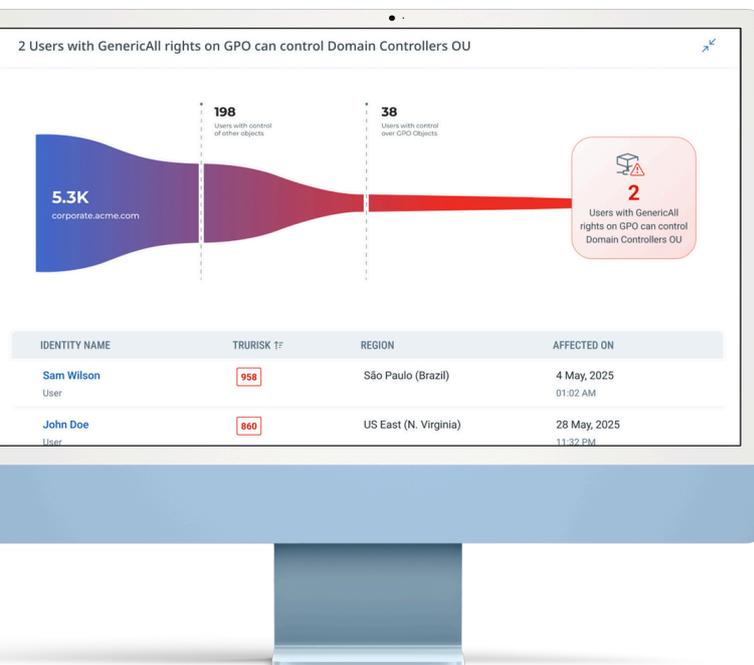

Faster risk prioritization with one risk language - Identity TruRisk™ rolls up to org-level TruRisk™ for comparison alongside vulnerabilities and misconfigurations within a single prioritized risk view.

Frictionless risk orchestration with reduced tool sprawl - Consolidate identity risk signals from Qualys Cloud agent, network sensors and third-party identity security tools inside your risk operations center.

Audit-ready compliance & governance – Map identity controls to frameworks (DISA, CIS, HIPAA/GDPR/PCI) with executive-ready and audit-friendly dashboards.

Close high-risk identity attack paths – Visualize most exploitable attack paths, run real-time integrity monitoring and remediate with native workflows for risk reduction.

Sign up for your 30-day no-cost trial and secure your identity posture.
