

Qualys Certificate View v3.3

API Release Notes

Version 3.3

November 30, 2023

Issue Addressed

User received an internal server error when accessing List CertView Certificates (v2) API.

The application encountered issues fetching unavailable certificates with given filters. We have now made improvements to the workflow. Users now receive empty records indicating that there are no certificates available for the given filter application.

Impacted API: **POST/certview/v2/certificates**

To know more about List CertView Certificates (v2) API, refer to the [Certificate View API user guide](#).
