Qualys Certificate View

Release Notes

Version 2.4.1.0
November 13, 2019

Here's what's new in Certificate View!

Scan permission for Certificate View

A new Certificate View permission is now available in the Administration (Admin) module. This new "Scan" permission allows the user to run Certificate View scans. Note that Certificate View permissions are only available in the Admin UI when this module is enabled for the subscription.

A user with the "Scan" permission will be able to:

- Add/Remove sites in Assets > External Sites
- Launch/Cancel scans in External Sites and Internal Sites

Note: This does not affect the permissions the user has been given through VM. If the user has the permission to add hosts or launch scans directly in VM, they will still be allowed to do this through the VM UI or API.
