Qualys Certificate View

Release Notes

Version 2.8.1
May 27, 2021

Here's what's new in Qualys Certificate View 2.8.1!

Search for Certificates with a Specific Validity

You can now search for certificates with a specific validity. We have added the following new QQL tokens:

Certificates tab: **validity**

Assets tab: **certificate.validity**

Refer to the token help (UI or Online Help) for more information about the tokens.

New Vulnerability QIDs for CertView scans

We have added the following vulnerability QIDs to the default CertView scans for Vulnerability Detection:

86001, 86000, 48143, 45231, 38764, 38706, 38704, 38597

Issues addressed in this release

- We have fixed the grade discrepancies for a certificate that was observed between SSL Labs and Certificate View with this release.
- We fixed an issue where on running the VM scan on an asset, the IP address was not displayed in Certificate View. The asset is now displayed accurately in the Certificate View UI.
