Qualys Certificate View

Release Notes

Version 2.8.2
July 8, 2021

Here's what's new in Qualys Certificate View 2.8.2!

Issues addressed in this release

- We have now increased the export limit on the External Sites page, from 5000 records to 10000 records.
- We fixed an issue, and now the search box in the External Sites tab is not case-sensitive. Search terms, provided in any case, fetch accurate search results.
- We have developed a cleanup utility to remove any trailing asset details of assets deleted from the AssetView module. After executing this utility, an updated and accurate asset list is displayed in the Assets tab. You can contact Qualys support if you see assets in CertView but not in the AssetView module.
