Qualys Certificate View

Release Notes

Version 2.8.4
December 22, 2021

Qualys Certificate View 2.8.4 brings you many improvements and updates!

Issues addressed in this release

- We have fixed an issue where the intermediate certificate in the Certificate Path was incorrectly displayed as expired.
- We have updated the online help and user guide to clarify that we do not support the Binary format for importing certificates. The supported file format for a certificate is Base64 encoded ASCII. We recommend you convert the file to Base64 encoded ASCII format before uploading.
- We have now fixed an issue where a blank screen was displayed when creating a dashboard widget that displays the results as Assets.

For this release, to view all the assets with a null value for the Operating System, use the search token asset:(OperatingSystem:``) in the query in the Assets tab.
