Qualys Cloud Platform (VM, PC) 10.x

Release Notes

Version 10.18.1
April 21, 2022

We addressed the following issues in this release of the Qualys Cloud Platform (VM, PC).

Issues Addressed

- Prior to this fix, if a user entered parenthesis as part of the default value in a user-defined control (UDC) we were automatically converting the parenthesis to underscores when the control was saved. Now parenthesis can be included and they will no longer be converted to underscores.

- We've improved policy processing performance when policy processing is triggered as the result of a user-defined control (UDC) update.

- We fixed an issue where the pop-up window for requesting and editing exceptions was slow to load.
