

Qualys Cloud Platform (VM, PC) v10.x

API Release Notes

Version 10.26.2

April 19, 2024

This new version of the Qualys Cloud Platform (VM, PC) includes improvements to the Qualys API. You'll find all the details in our user guides, available at the time of release. Just log in to your Qualys account and go to Help > Resources.

[Issues Addressed](#)

Qualys API Server URL

The Qualys API URL you should use for API requests depends on the Qualys platform where your account is located.

[Click here to identify your Qualys platform and get the API URL](#)

This documentation uses the API server URL for Qualys US Platform 1 (<https://qualysapi.qualys.com>) in sample API requests. If you're on another platform, please replace this URL with the appropriate server URL for your account.

For this API Release Notes, instead of providing any platform-specific URL, `<qualys_base_url>` is mentioned in the sample API requests.

Issues Addressed

- While executing the API endpoint /API/2.0/fo/asset/host/vm/detection/ with different combinations of the parameters, it returned an invalid CSV. The CSV file mapped the incorrect data associated with the incorrect columns. Relevant code changes have been made to fix the issue.
- When the users were importing option profiles with ports greater than 2048 using API, they were experiencing validation error. Relevant code changes have been made to fix this issue.
