

# Qualys Cloud Platform v3.x

## Release Notes

Version 3.2.1

October 26, 2020

Here's what's new in Qualys Cloud Suite 3.2.1!

### **CA** Cloud Agent

[New Mandatory Parameter for Windows Agent Installer](#)  
[Middleware PC Manifest Version in Asset Details](#)

**Qualys Cloud Platform 3.2.1 brings you many more Improvements and updates! [Learn more](#)**

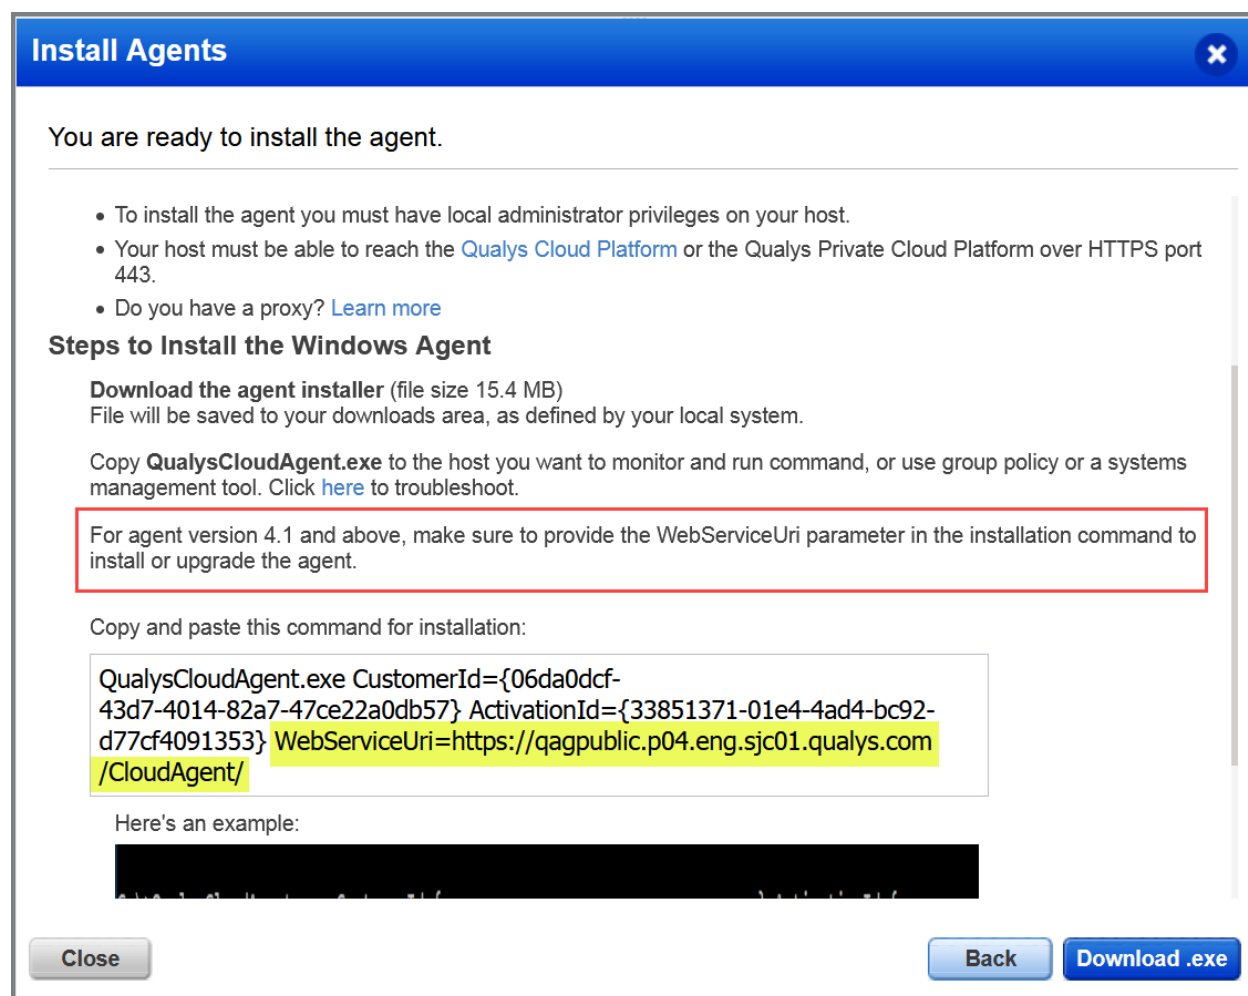

## New Mandatory Parameter for Windows Agent Installer

With this release, we have added a new mandatory parameter, `WebServiceUri`, to the Windows Installer, if your Windows Agent version is 4.1 or above. This parameter indicates the cloud platform associated with the agent. This allows for the same agent installer to be used in deployment packages, by changing this parameter, in situations where multiple subscriptions are in use across different platforms.

We have added a note on this new mandatory parameter as part of the Windows installation instructions on the **Install Agents** screen.

New command with the new mandatory parameter:

```
QualysCloudAgent.exe CustomerId={xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxxxx}  
ActivationId={xxxxxxxx-xxxx-xxxx-xxxx-xxxxxxxxxxxxxx}  
WebServiceUri=<platform_url>/CloudAgent/
```

The screenshot shows a window titled "Install Agents" with a close button in the top right corner. The main content area has a blue header bar with the title. Below the header, the text "You are ready to install the agent." is displayed. A list of three bullet points provides prerequisites: local administrator privileges, network reachability to the Qualys Cloud Platform over HTTPS port 443, and a link to learn more about proxies. A section titled "Steps to Install the Windows Agent" follows, containing instructions to download the 15.4 MB installer, copy it to the target host, and run the installation command. A red-bordered box highlights a note for agent version 4.1 and above, stating that the `WebServiceUri` parameter must be provided. Below this, a text box shows a sample command with the `WebServiceUri` value highlighted in yellow. A "Here's an example:" label is followed by a blacked-out command line. At the bottom, there are "Close", "Back", and "Download .exe" buttons.

**Install Agents**

You are ready to install the agent.

- To install the agent you must have local administrator privileges on your host.
- Your host must be able to reach the [Qualys Cloud Platform](#) or the Qualys Private Cloud Platform over HTTPS port 443.
- Do you have a proxy? [Learn more](#)

**Steps to Install the Windows Agent**

**Download the agent installer** (file size 15.4 MB)  
File will be saved to your downloads area, as defined by your local system.

Copy **QualysCloudAgent.exe** to the host you want to monitor and run command, or use group policy or a systems management tool. Click [here](#) to troubleshoot.

For agent version 4.1 and above, make sure to provide the `WebServiceUri` parameter in the installation command to install or upgrade the agent.

Copy and paste this command for installation:

```
QualysCloudAgent.exe CustomerId={06da0dcf-43d7-4014-82a7-47ce22a0db57} ActivationId={33851371-01e4-4ad4-bc92-d77cf4091353} WebServiceUri=https://qagpublic.p04.eng.sjc01.qualys.com/CloudAgent/
```

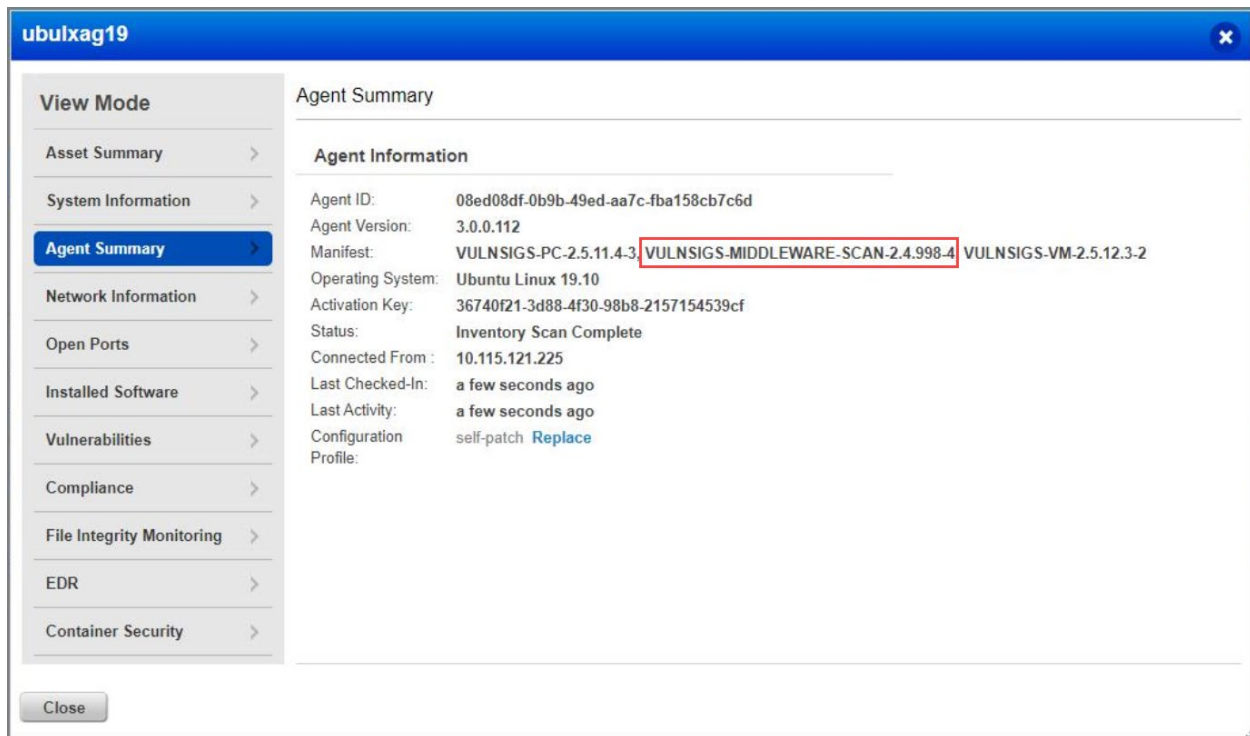

Here's an example:

Close Back Download .exe

## Middleware PC Manifest Version in Asset Details

**Asset Details > Agent Summary** will now show the Middleware PC manifest version if you are using Middleware PC to scan the asset for compliance.

This information is seen only when the PC module is enabled for your subscription and the Cloud Agent installed on the asset is activated for PC.

## Issues addressed in this release

We have fixed the following issues in this release:

### AV AssetView

- We have now fixed an issue to correctly display the Last Evaluated Date on the Asset Details page of the Compliance tab.

### CA Cloud Agent

- Updated [Cloud Agent \(CA\) API User Guide](#) with **type (string)** parameter as mandatory in the 'Update activation key' API.
- Fixed an issue where 'State' was not being updated for **Asset Details > EC2 Information** after processing provision request.
- Fixed an issue where OS regex-based dynamic tags were assigned incorrectly to assets due to incorrect sticky value getting assigned to agents while merging assets.

**WAS****Web Application Scanning**

- We removed the "Configure Scan Schedules" option from the tutorials page as WAS users with Qualys Community Edition are not allowed to schedule scans.
- We updated the Manage Detections topic in the WAS Online Help to add information about updating the status of detection when the vulnerable URL isn't found in the scan.

**Qualys Cloud Platform**

We have revised the description for the lastCheckedIn search token with better examples in the Online Help.
