QUALYS®

Qualys Cloud Suite 8.8.4

This release notes provides a brief description of enhancements and fixes.

Features & Improvements

- We've increased the number of remediation policies allowed to 999.

- We've increased the number of UDP ports allowed in the scan option profile. Note that scanning a large number of UDP ports can take a considerable amount of time.

Addressed Issues

- Fixed an issue where users were seeing an error stating they had reached the maximum number of IPs allowed for their account.

- Fixed a scan processing issue when scanning hosts tracked by DNS hostname. The Scan Results Appendix section will now show accurate counts for the number of hosts scanned.

- Fixed an issue where the NTLMv1 authentication protocol was being selected in Windows authentication records created prior to the 8.8.0 release.

- Fixed an issue where the NTLMv1 authentication protocol was being selected in MS SQL authentication records created prior to the 8.8.0 release.
