You can now choose to exclude results in the vulnerability detection data. Specify the new input parameter “show_results=0” to exclude results from the API
/api/2.0/fo/asset/host/vm/detection/.

Parameter	Description
show_results={0 1}	(Optional) When not specified, results are included in the output. Specify show_results=0 to exclude the results. If you exclude the results, CSV will have an empty Results column, and XML will not contain the Results tag.
