Qualys Container Scanning Connector for Bamboo

Release Notes

Version 1.6.1.1
May 15, 2020

Here's what's new in the Qualys Container Scanning Connector for Bamboo!

- We now support latest Bamboo server versions: v6.10.5 and v7.0.3.

- We now support Qualys Gateway APIs for API requests . Click here to see the list of Gateway APIs.

- You can now use regular expressions for defining search pattern in the "Fail with any of these Softwares" condition.

- On the Scan Report page, in the report header, we added a new field "Scan Report" that will show a link that you can click to view the image summary on Qualys Portal.

- The plugin API request for fetching the container images data will fail if it is unable to find a container image for tagging and respective images details in your account on Qualys Portal.

- The CS Reports tab will be visible only if the step 'Scan Container Images with Qualys CS' is added and successful scan results are generated by the Qualys Container Scanning Connector for Bamboo.
