

# Qualys Container Scanning Connector for Jenkins

## Release Notes

Version 1.6.2.0

February 26, 2021

Here's what's new in the Container Scanning Connector for Jenkins!

- We will now use the "lastScanned" filter in the API call to ensure that plugin fetches the latest scan result for the specified image ID.
- The plugin will now check before tagging the image if the sensor container is running on the host and if it is installed in the CI/CD mode.
- When multiple images are specified in the image ID input and during the scan, if the build timeout is reached for any of them, then the plugin will generate the scan result and render the report for the images for which it receives the scan data.
