Qualys Container Security v1.x
API Release Notes

Version 1.6.3

January 27, 2020

Qualys Container Security API gives you many ways to integrate your programs and API calls with Qualys capabilities.

What's New

Support for Qualys API Gateway URLs

Support for Qualys API Gateway URLs

Container Security now supports using the API gateway URLs for API requests along with the API server URLs.

The Qualys API gateway or server URL you should use for API requests depends on the Qualys platform where your account is located.

Click here to identify your Qualys platform and get the API URL

You must authenticate to the Qualys Cloud Platform using Qualys account credentials (user name and password) and get the JSON Web Token (JWT) before you can start using the Gateway URLs. Use the Qualys Authentication API to get the JWT.

For example,

```
curl -X POST https://gateway.qg1.apps.qualys.com/auth -d
"username=value1&password=passwordValue&token=true" -H "Content-
Type: application/x-www-form-urlencoded"
```

where gateway.qg1.apps.qualys.com is the base URL to the Qualys API server where your account is located.

- **username** and **password** are the credentials of the user account for Container Security

- **token** should be true

- **Content-Type** should be "application/x-www-form-urlencoded"

The Authentication API returns a JSON Web Token (JWT) which you can use for authentication during Container Security API calls. The token expires in 4 hours. You must regenerate the token to continue using the Container Security API.

Container Security API documentation for Gateway URLs is available at:

```
https://<Qualys_Gateway_URL>/apidocs/csapi/v1.2
```

For example, if your account is on US Platform 1

```
https://gateway.qg1.apps.qualys.com/apidocs/csapi/v1.2
```
