

# Qualys Container Security

## Release Notes

Version 1.6.4

March 27, 2020

Here's what's new in Container Security 1.6.4!

[Support for Azure Container Registry](#)

## Support for Azure Container Registry

You can now connect to your Azure account to scan the Azure Container Registry (ACR) images for vulnerabilities.

In the Create New Registry window, select the Registry Type as Azure Container Registry.

Provide the required information in the Connector Details window. The right hand side panel contains instructions on creating the Application ID and Client Secret.

← Registry Type: Azure Container Registry Connector

Connector Details

Give your connector a name and provide a description (optional).

Name

Create Connector

Create Application and get Application ID & Client Secret

Create Application in Azure Active Directory and you can then note the Application ID and generate the client secret.

1. Log on to **Microsoft Azure portal**, navigate to **Azure Active Directory** then to **App Registrations**.

2. Click on **New Registration** and provide the following details:

a. **Name:** A name for the application.

b. **Supported account types:** Single Tenant and Accounts in this organizational directory only.

3. Click on **Register**.

4. Copy the **Application (client) ID**.

5. Navigate to the **Certificates & secrets** on the left panel then generate client secret by clicking on **New Client Secret**, provide the following details:

a. **Description:** A description of the client secret.

b. **Expires:** Never.

c. Click on **Add**.

d. Copy the Client secret that is generated.

Assinging Service Principal

Configure the Scan Settings to choose to scan immediately (On Demand scan) or on an ongoing basis (Automatic scan).
