

Container Security

Release Notes for Sensor

Version 1.2.6

May 30, 2019

Here's what's new in the Container Security Sensor!

Sensor log enhancements

The sensor log file (qpa.log) now contains performance and registry information.

Performance information includes:

It includes CPU usage, memory usage, network traffic (NET IO), reads/writes to physical disk (BLOCK IO) and PIDS.

Registry information includes:

Wait time, Scan time, Total time, Docker Pull time, and Scan Result upload time for all registry jobs.

Fixed Issue

Fixed an issue where the CICD sensor did not scan blacklisted images. CICD scans are on-demand scans and all images including the blacklisted ones are scanned for vulnerabilities.
