

# Container Security

## Release Notes for Sensor

Version 1.4.1

May 21, 2020

Here's what's new in the Container Security Sensor!

### Support for Containerd Runtime (Beta)

With this release you can install the Container Sensor in Kubernetes with containerd runtime. You'll use a Kubernetes yaml file template to deploy the sensor. Containerd is supported by the general (host) sensor. It is not supported by registry sensor or build CI/CD sensor. See the [Qualys Container Security Sensor Deployment Guide](#) for detailed instructions.

### Issues Addressed

- We fixed an issue that was causing multiple copies of the same header for docker version being populated for a single event or inventory upload request.
- We fixed an issue that was causing an increase in scan time for container images.
