Qualys Endpoint Detection and Response v1.x

Release Notes

Version 1.7

September 21, 2021

Endpoint Detection and Response 1.7 brings you more improvements and updates! Know more

Issues Addressed

- We fixed an issue where there was a discrepancy in the detection count shown on the Active Threat by Hosts of the Assets tab and the Current View of the Hunting tab.
- We fixed an issue where if you click on the Argument to open all the events with the same arguments on the Hunting tab, an invalid token error was shown. The issue occurred because single and double quotes were added to the argument while searching.
