

Qualys File Integrity Monitoring v2.x

Release Notes

Version 2.3.1

July 30, 2020

With FIM 2.3.1, we have addressed the following issues:

- The Event Details page will now display IPv4 address. The IPV4 address is reflected immediately for the assets activated after the FIM 2.3.1.0 deployment. For existing assets, it will take 24-30 hours to reflect the IPV4 address for the new events.
- We have fixed the issue with the Incidents approval workflow.
