

Qualys File Integrity Monitoring v2.x

Release Notes

Version 2.6

January 15, 2021

[Display Correlation Rule ID](#)

[Tokens Updated](#)

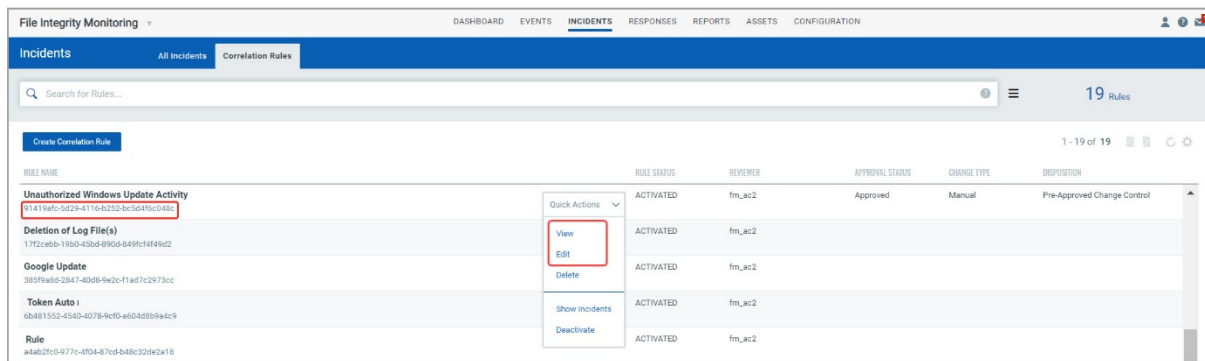

[Run Again Option Creates a new Report](#)

Display Correlation Rule ID

We now display the correlation rule ID on the Correlation Rules tab under Incidents. This rule id can be used to:

- Create incident-based alerts.
- Update, delete, activate, and deactivate correlation rules using API.

You can also view the correlation rule ID on the View and Edit page under Quick Actions menu.

Tokens Updated

To give you a granular-level understanding of the agent and manifest status, we have added some new options to the following tokens:

- agentService.status
 - CONFIG_PROFILE_APPLIED: Agent has applied the updated configuration, and the new configuration is in effect.
 - CONFIG_PROFILE_DOWNLOAD_SUCCESS: Agent has successfully downloaded the updated agent configuration profile from the Platform.
 - CONFIG_PROFILE_DOWNLOAD_FAILED: There was an error while downloading the updated agent configuration profile from the Platform.
 - FIM_ENABLED: FIM has been enabled in the agent configuration profile.
 - FIM_DISABLED: FIM has been disabled in the agent configuration profile.
- manifest.status
 - FIM_MANIFEST_ASSIGNMENT_FAILED: There was an error while downloading the new manifest from the Platform. The agent will continue to use the older manifest applied.

For a complete list of token options, see the Assets tab on FIM UI.

Run Again Option Creates a new Report

After you click the Run Again option under the Quick Actions menu on the Reports tab, it will now generate a new report with the same name but updated data, date, and time. This feature will enable you to compare the previous and current data.

Note: You cannot rerun reports that have special characters in their name.

The screenshot shows the 'File Integrity Monitoring' interface with the 'REPORTS' tab selected. The 'Reports' section displays a list of reports. The first two reports, both titled 'report download testing', are highlighted with red boxes. The first report was created 'a few seconds ago' at 6:28:45 PM. The second report was created '4 hours ago' at 2:17:41 PM. A 'Quick Actions' menu is open for the second report, showing options: 'Download', 'Delete', and 'Run Again'. The 'Run Again' option is highlighted with a red box. The table also shows reports for 'inci02' and 'oracle_22'.

CREATED DATE	REPORT TITLE	FORMAT	STATUS
a few seconds ago 6:28:45 PM	report download testing	pdf	Completed
4 hours ago 2:17:41 PM	report download testing	pdf	Completed
8 hours ago 10:43:16 AM	inci02	html	Accepted
8 hours ago 10:43:10 AM	oracle_22	pdf	Completed
