

Qualys File Integrity Monitoring (FIM)

Release Notes

Version 3.4.0

April 20, 2022

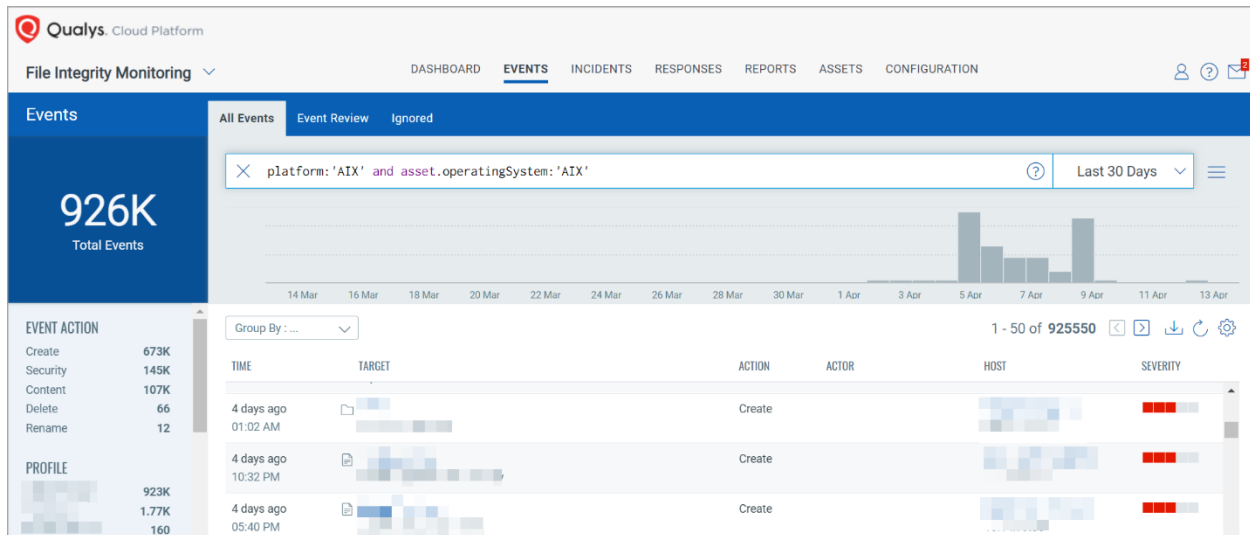

Here's what's new in Qualys File Integrity Monitoring 3.4.0!

[Support for FIM assets on AIX](#)

Support for FIM assets on AIX

With this release, FIM extends its platform support to include AIX. Now you can monitor events and incidents for FIM assets on the following AIX versions:

- 6.1
- 7.1
- 7.2

Important Notes:

- The actor.process, actor.UserID, actor.UserName, and actor.imagePath QQLs are not supported for FIM assets on AIX. Hence, in the **Events** page, the **Actor** column does not display any data if you use these QQLs to search for events.
- The QQL agentService.status is not supported for FIM assets on AIX. Hence, in the **Assets** page, the **Agent Status** column does not display any data if you use this QQL to filter out assets.
- The following manifest statuses are currently not supported for AIX assets:
 - FIM_MANIFEST_APPLICATION_FAILED
 - FIM_MANIFEST_APPLIED_SUCCESS
 - FIM_MANIFEST_ASSIGNED
 - FIM_MANIFEST_ASSIGNMENT_FAILED
