Qualys File Integrity Monitoring (FIM)

Release Notes

Version 3.4.2

October 13, 2022

Fixed Issue

Event filter with a wildcard character failed to fetch results

Searching for events by using filters that included a wildcard character did not fetch results for some file extensions. For instance, searching for events by using a wildcard as shown in the following examples would fetch no results:

```
file.name:*.fim
```

```
file.name:*.log
```

This issue is now fixed and event searches that include wildcards now display results for all types of files.
