Qualys Gateway Service v1.x

# Release Notes

Version 1.3.2

June 24, 2021 (Updated July 30, 2021)

Qualys Gateway Service 1.3.2 brings you the following improvement:

Enabling Allowed Domains

With this release, we have added an option which will help you to allow traffic for the required domain.

Default Domains Allowed: qualys.eu, qualys.ca, qualys.com, qualys.in

Issue Addressed

- Fixed an issue in the docker where the Overlay2 and Volume folders were occupying too much disk space. The QGS primary disk requires a minimum of 30 GB space. For Patch Mode, a second disk with minimum 250 GB size is required.

- Fixed an issue where the CAMSD puppet runs were failing with a time-out issue as it was taking more than 60 minutes to complete.

- Fixed an issue where port conflict was occurring for 514 port which is used by CAMS core rsyslog and the XDR Syslog Collector.
