Global AssetView/CyberSecurity Asset Management 2.7 brings you many more improvements and updates! [Learn more](#)

Inventory List, Asset Details, and Trending Widget Enhancements

GAV CSAM

Inventory List:

With this release, we've updated the 'Sources' column in the Asset Inventory list to display all the icons of different inventory sources from where the asset was collected.

For a particular source, you can hover on the icon to see the first found and last seen date. Aggregate first found and last seen dates for all sources is displayed under the list of icons.

Asset Details:

With this release:

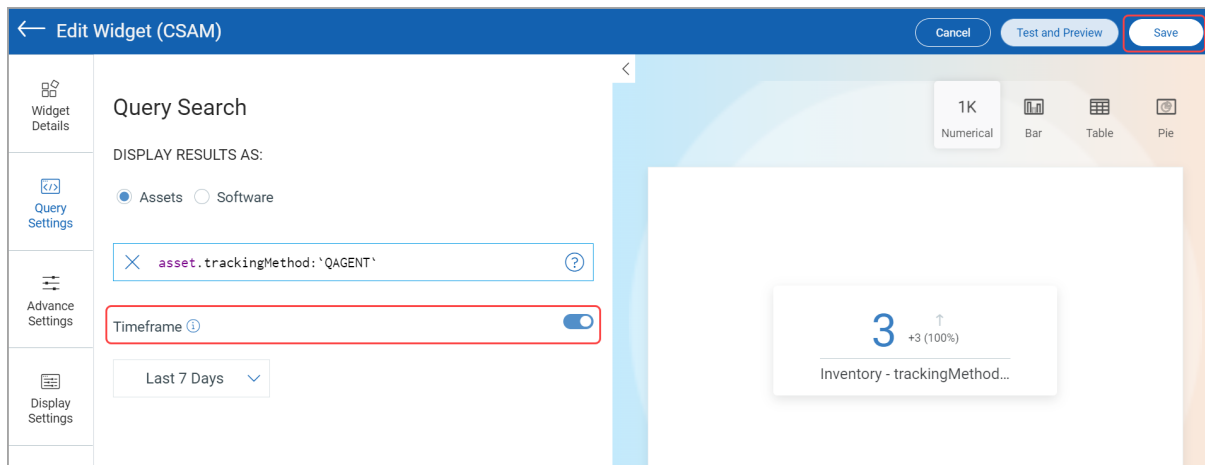

(A) We've renamed 'Sensors' to 'Sources' from the left pane of the asset details page.

(B) We've also grouped all different sources and included those in the new 'Summary' tab under 'Sources'. It is further categorized as sensors and external sources. Sensors show all the Qualys sources.

Trending Widget:

For the timeframe enabled trending widget, you need to edit widget and Save it again. This will avoid discrepancies in the results of inventory query and trending widget query.

Edit the widget and just click **Save**!

Business Information Tagging Rule Enhancements GAV CSAM

With this release, we've added support for more business information attributes while creating a rule to tag assets.

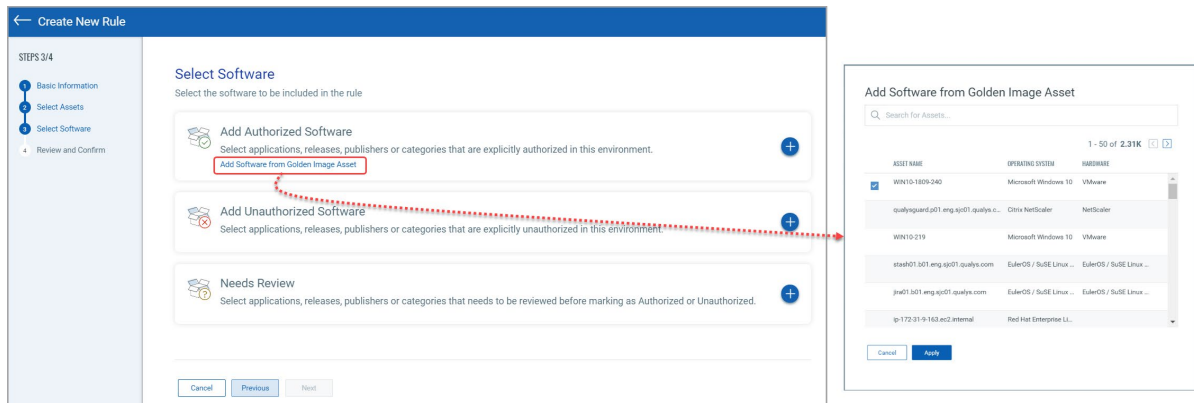

Following is the list of newly supported attributes:

- asset.ownedBy
- asset.managedBy
- asset.supportedBy
- asset.assignedLocation.name
- asset.assignedLocation.city
- asset.assignedLocation.state
- asset.assignedLocation.country
- businessApp.id
- businessApp.operationalStatus
- businessApp.businessCriticality
- businessApp.environment
- businessApp.ownedBy
- businessApp.managedBy
- businessApp.supportedBy
- businessApp.supportGroup

Track Authorized/Unauthorized Software – Golden Image Assets

With this release, you will be able to add software from the golden image asset list while creating a software rule.

Navigate to **Rules > Software Rules > Create Rule**. In the **Authorized Software** bucket, click **Add Software from Golden Image**.

Note: While updating the existing added software from golden image assets, it will overwrite the existing selection.

Report Scheduling CSAM

With this release, we've added a step to schedule the reports (Asset Details, Software, Missing Software, and Compliance reports) for 'On Demand' and 'Schedule' types.

On Demand: If this option is selected in the report, the report will be generated once it is created. Select the timezone for dates in the report to be generated.

Schedule: If this option is selected in the report, the report will be generated as per the defined schedule. You can create a recurring schedule for report execution. Select the timezone for dates in the report to be generated.

← Create New : Asset Details

STEPS 4/5

- 1 Basic Details
- 2 Report Source
- 3 Report Display
- 4 Report Schedule
- 5 Summary

Report Schedule

Configure scheduling for your report

Schedule: Schedule the report to run at a same time.

Start Date * Start Time *

☒ Recurring

Repeats * Start Time *

End Date End Time

Timezone Settings

Select the timezone to use for dates included in the report *

You can manage schedules (view info, delete, and pause/resume schedule) from **Reports > Schedule** tab.

Report Search CSAM

With this release, you'll be able to search a report with Qualys Query Language (QQL) search. You can search report based on the report name, status, type, template, and created by tokens.

In the following sample screenshot, reports are searched with the query – **report.search: Completed**.

Asset Report- Weekly Test	CSV	quays_cf2	11 January, 2 10:42 AM	Asset Details	Scheduled	Completed

Issues Addressed

- We fixed an issue where the `inventory.lastUpdated` token search was not showing correct results.
- Fixed an issue where a 404 error was occurring while creating a report from the inventory (asset/software) list download option.
- Fixed an issue where the End-of-Life and End-of-Service information for IBM MQ was not appropriate.
- Fixed an issue where the blank screen was displayed while editing a tag.
