

Qualys Indication of Compromise v2.x

Release Notes

Version 2.3

January 31, 2020

Here's what's new in Qualys IOC 2.3!

[Enhancements to Event Tree View](#)

[Rules tab Renamed to Responses](#)

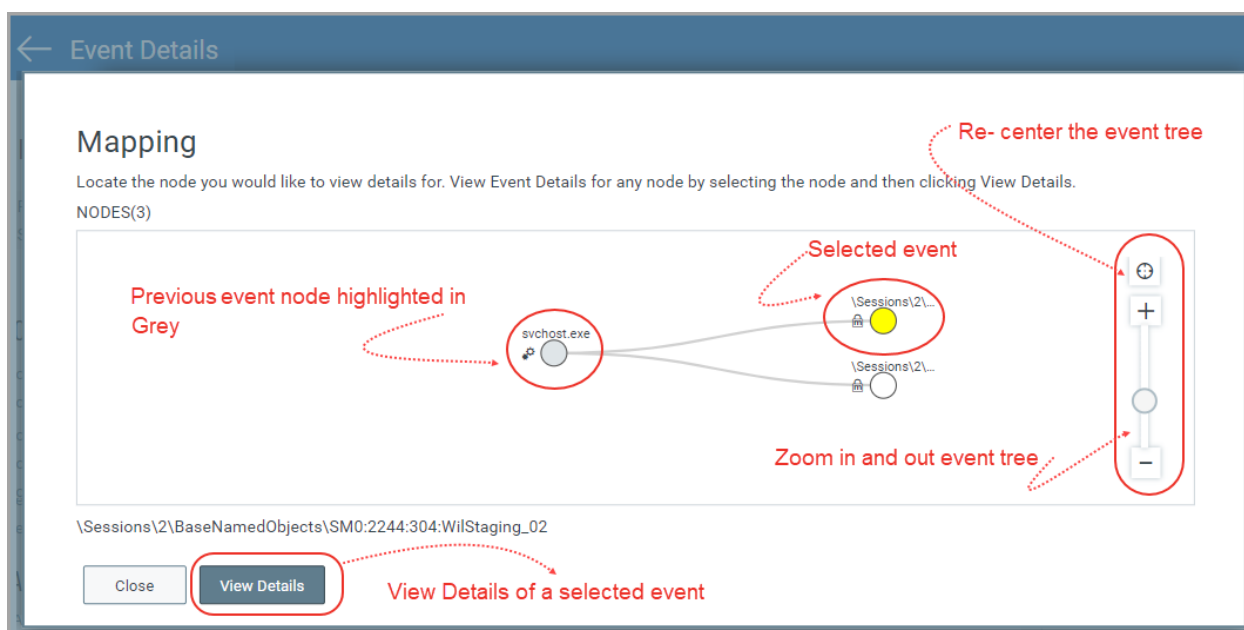

Qualys IOC 2.3 brings you many more improvements and updates! [Learn more](#)

Enhancements to Event Tree View

We made several enhancements to the event's tree view that shows mapping of related events for an event. With this enhancement, when you now traverse from an event node of a type process, mutex or network, the selected node is shown in yellow and the node from which you traversed will be shown in Grey.

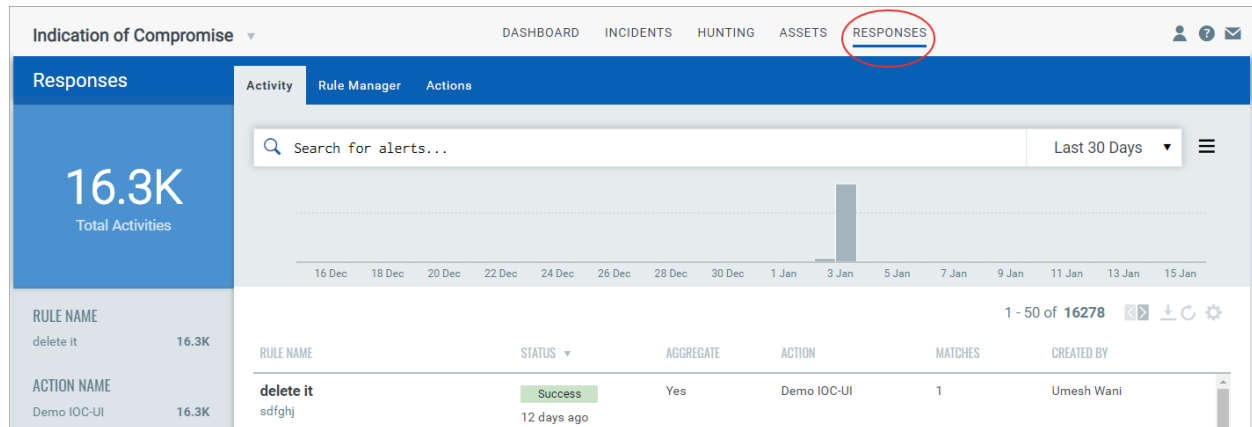

We also improved the experience of traversing the event nodes of an event in the event tree view. While navigating an event's tree, you can now click on an event node to view its tree in the same view. When you click on an event node in the tree view, we will load the tree for the selected event and show its parent and child nodes. The Event Details page will show you the details of the selected node when you click View Details.

Event's tree view now displays a zoom bar to zoom in and out the event's tree. Zoom bar has plus and minus button for this purpose. It has a re-center button to restore the tree to the center of the screen with its original size.

Rules tab Renamed to Responses

We changed the name of the Rule tab to Responses. You will use the tab for creating and managing rules.

Issues Addressed

- We made an improvement where the search query provided in the search box in the Hunting tab will now be saved when the user switches between Hunting and other tabs or click the back button on the browser.
