

# Qualys Global IT Asset Inventory v1.x

## Release Notes

Version 1.2

July 1, 2020

Here's what's new in Qualys Global IT Asset Inventory 1.2!

[Tagging](#)

[Widget for Asset Distribution by Geolocation](#)

[Support for Detection of Middleware Servers](#)

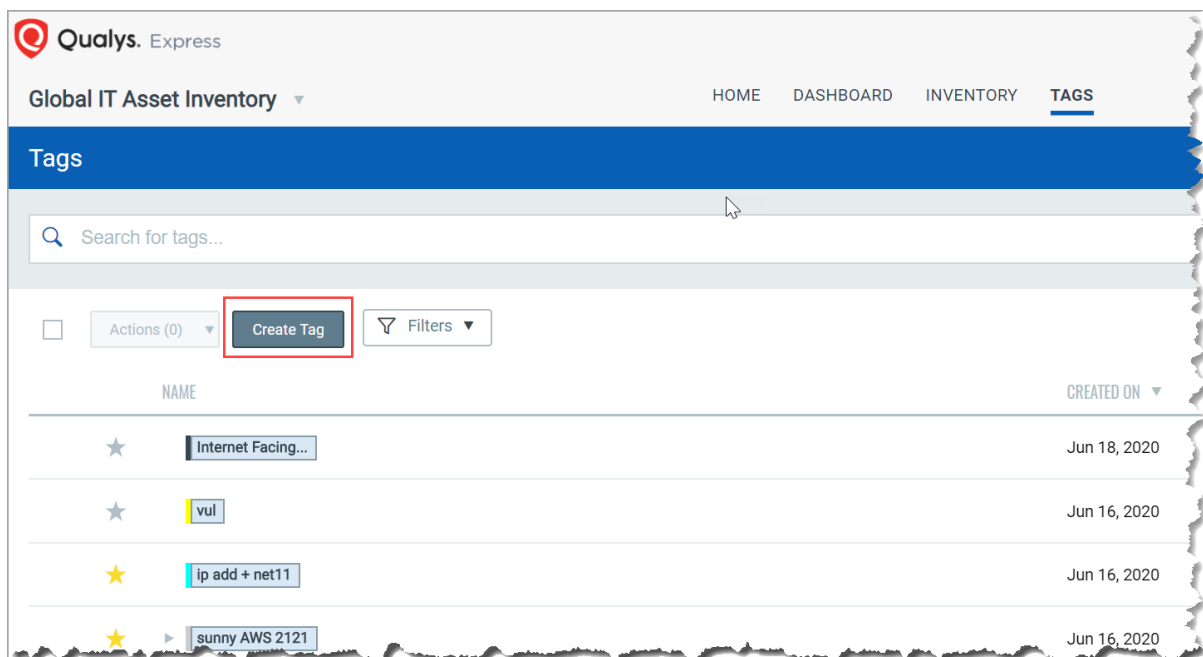

**Qualys Global IT Asset Inventory 1.2 brings you many more improvements and updates! [Learn more](#)**

## Tagging

With this release, you can create and manage tags from Global IT Asset Inventory (AI) module. You can configure tags and then you can apply them to assets in your subscription. This helps you to organize your assets and to manage user access to them. You can apply tags to IP addresses and web applications.

### How to create tags?

1) Go to Global IT Asset Inventory (AI) > Tags > Create Tag.

2) In the Create New form, provide Basic Details, Tag Properties, and Tag Type data.

**Basic Details** – Name for your tag, select 'Mark as Favourite' checkbox if you wish to create tag as favourite, and description for your tag.

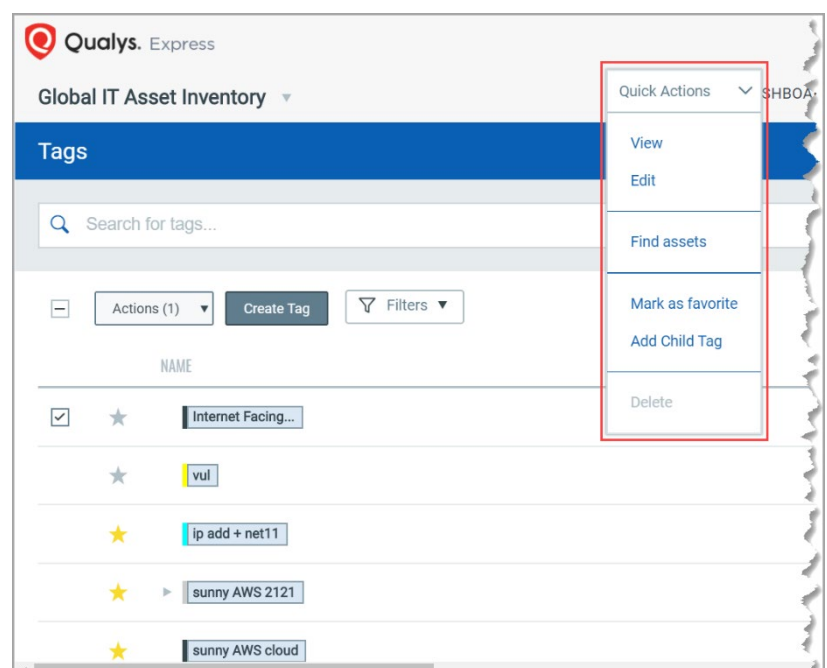

**Tag Properties** – You can set color for your tag, create or select parent tag for your tag.

**Tag Type** - There are two types of tags - Static and Dynamic. By default, static tag will be created. Dynamic tag allows you to define Tag Rules.

### Manage your tags

Once tag is created, it will be displayed in tag list. With quick actions menu, you can view tag, edit tag, find assets associated with the tag, mark or remove tag as favourite, add child tag for the tag. You can filter the list of tags using favourite, not in use, and in scope checkbox. You can also filter tags based on the color applied to tags.

For more information on Tags, refer *Online Help* from UI.

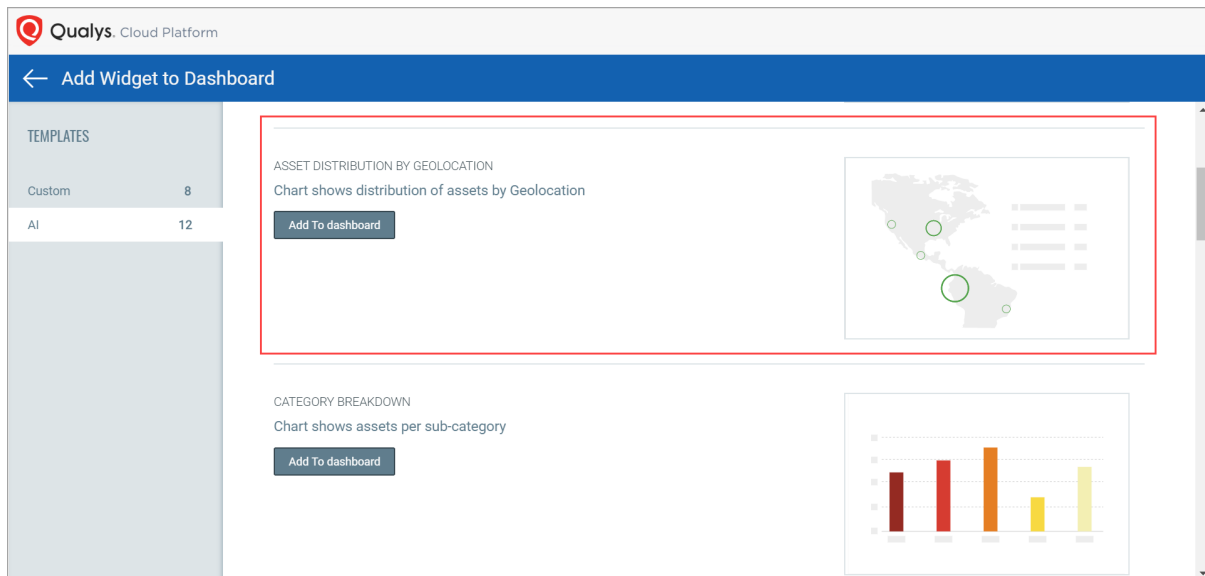

## Widget for Asset Distribution by Geolocation

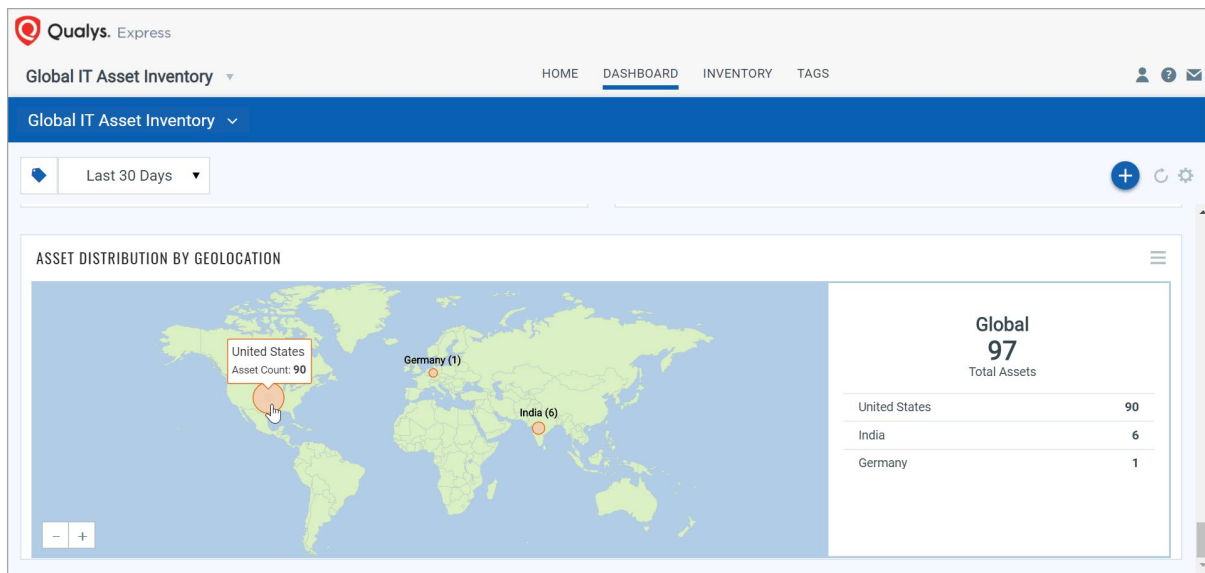

With this release, you can add new widget which shows asset distribution by geolocation.

### How to add this widget?

1) Go to Global IT Asset Inventory (AI) > Dashboard. Select a dashboard and then click Add Widget and you can see Asset Distribution by Geolocation template under AI tab.

2) Click Add to dashboard and you'll see asset distribution by geolocation widget for your dashboard. You can drill-down the country to display cities and count of assets in those cities by clicking on location bubble for country. Mouse hover on the location shows location and number of assets for that location.

## Support for Detection of Middleware Servers

With this release, ITAM has added the support for the detection of following Middleware Servers which will get displayed under Installed Software section:

- Oracle WebLogic Server
- Apache Tomcat Server
- Apache Web Server
- IBM WebSphere Application Server
- IBM HTTP Server
- IBM WebSphere MQ Series
- Oracle HTTP Server
- Microsoft IIS Server
- TIBCO Enterprise Management Service

## Issues Addressed

- Fixed an issue where asset count was different for the same query in AssetView and Global IT Asset Inventory.
- Fixed an issue where the Asset List API response was showing null assets with 500 Internal Server Error.
- Fixed an issue where, when searching the parent tag was not showing any result.
- Fixed an issue where Global IT Asset Inventory was appending unconfigured search criteria while editing widget and showing incorrect count of assets.
- Fixed an issue for the Safari browser where installed software applications were not getting listed.
