# Qualys Network Passive Sensor

# Release Notes

Version 1.6.1

January 09, 2024

## What's New?

### Support for NetBIOS Protocol

Network Passive Sensor backend (NPS) now supports NetBIOS protocol, which enables NPS to learn asset attributes extracted by Cloud Agent as a Passive Sensor (CAPS). To know more about CAPS, refer to *Qualys Cloud Platform 3.16 Release Notes*. For more information on how assets discovered by Cloud Agent as Passive Sensor are displayed in CSAM, refer to *CSAM Online Help*.

## Issue Addressed

With this release, we resolved an issue where users encountered an error while saving a CAPS configuration that contained local domain names. The local domain names are the domains that do not have a Top-Level Domain (TLD) as a suffix. Now, users can add all domain names.
