Search Tokens for Execution Details on QFlows Tab

We have introduced new tokens to view details of the execution of Qflows. To use these tokens, go to the **QFlows** tab, and select a Qflow. From the **Quick Actions** menu, select **View Execution Details**.

Token	Description	Example
source:	Search the execution details based on the source from where the qflow is triggered. Select the token from Batch, CV, Event, QSS, SNAPSHOT, SSM, or UI.	source: CV
execution:	Search the execution details based on the execution ID.	execution: 4d89bea0-172b-476f-a9c3-a5cf8f9d70cc
status:	Search the execution details based on execution status. Select the token from Error, Queued, Running, or Success.	status: success
regions:	Search the AWS execution details based on the region.	regions: us-east-1
resource_groups:	Search the AZURE execution details based resource group.	resource_groups: cloud-shell-storage-india
and	The Qualys Query Language (QQL) supports and logical query operators. Use these operators in your queries to narrow down your search.	status: Success and regions: us-east-1

Settings for Rows Shown on Execution Details Page

With this release, you can customize the number of rows to be displayed on the **Execution Details** page using  icon.
