

Qualys SaaS Detection and Response (SaaS DR)

Release Notes

Version 1.2.0

March 25, 2021

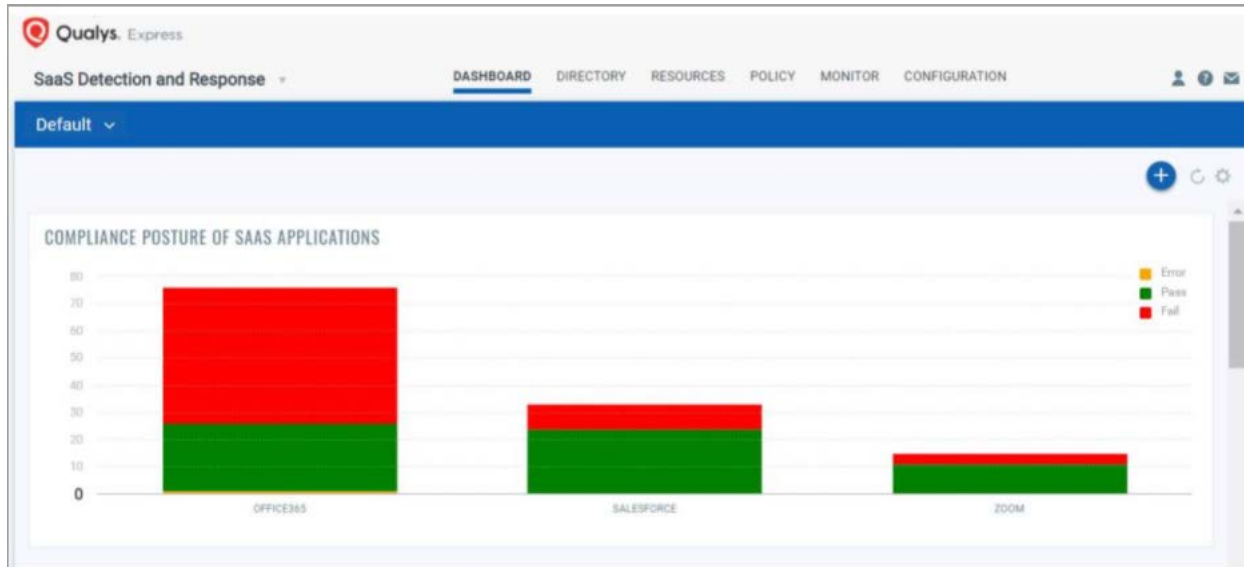

Here's what's new in SaaS Detection and Response 1.2.0!

[Compliance Posture Dashboard](#)

[CISA Events Monitoring](#)

Compliance Posture Dashboard

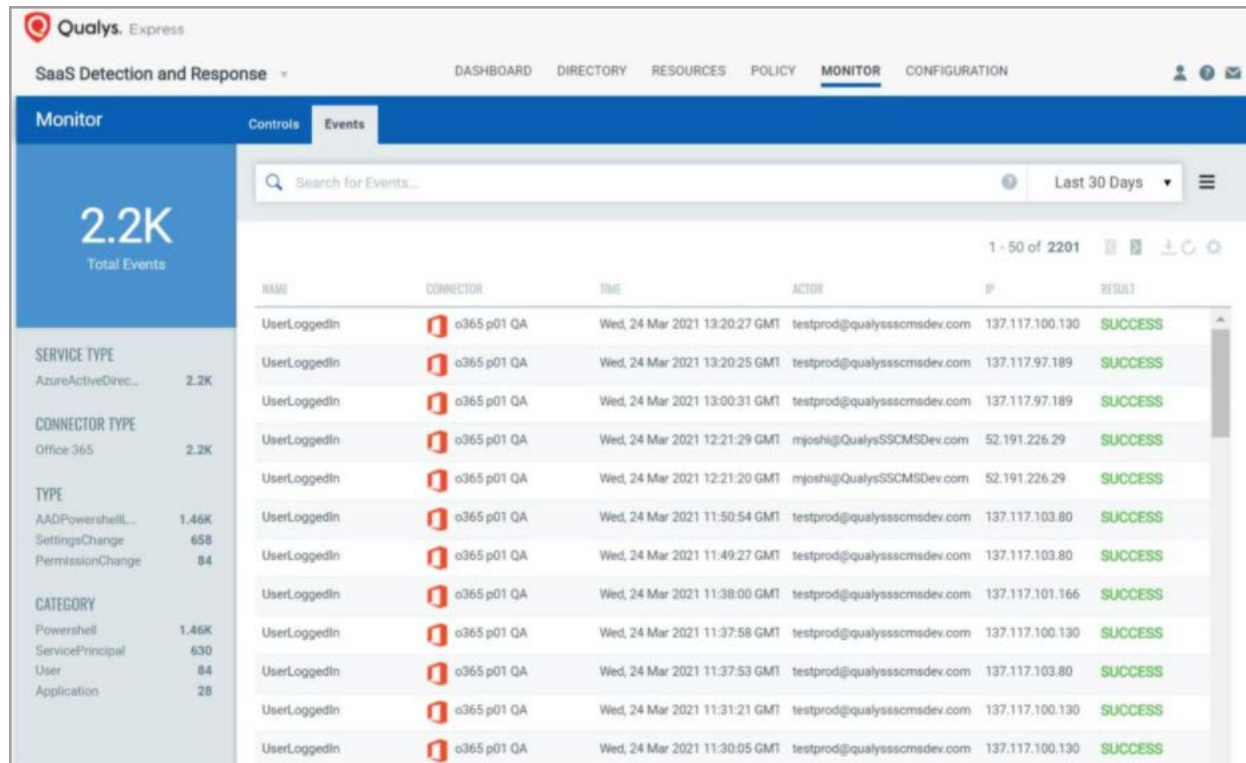

The Qualys SaaS SDR module now provides you with out-of-the-box compliance posture dashboard for all connectors that have monitoring policies enabled. Clicking on the widget of any individual connector type, provides users with a drill-down workflows on the monitor page with the necessary QQLs populated.

CISA Events Monitoring

SaaS DR currently monitors your Office365 logs for suspicious events as recommended by CISA. Once any of these events are detected in the logs, SaaS DR collects all the metadata corresponding to those events and presents them in a downloadable format for further analysis. All events are listed under 'Monitor > Events'.

Users can filter the activities by clicking on any Type or Category tab available in left navigation pane. Filter is based on the variations of the events appearing in the list.
