

# Qualys SaaS Detection and Response (SaaS DR)

## Release Notes

Version 1.3.0

June 15, 2021

Here's what's new in SaaS Detection and Response 1.3.0!

[Supporting Slack in Qualys SaaS DR](#)

[GSuite Compliance](#)

[Edit Connector Options](#)

[Changes on Monitor Tab](#)

[Removing Events Tab](#)

[Minor UI Changes](#)

[Bug Fixes](#)

## Supporting Slack in Qualys SaaS DR

Qualys SaaS Detection and Response (SaaS DR) now expands its support to a very popular collaboration and team messaging service - Slack. SaaS DR provides a single console for IT admins to get visibility into internal and external users as well as groups using Slack. It also provides access to Admins to look into files shared through Slack or through apps installed by Slack Users. Information such as who installed these applications using the company account and what permissions are granted can be viewed.

Access/View Slack Channels by navigating to **Directory > Groups > Entity Type: Channel**. Channel gives visibility to data of all internal and external members of the Slack organization.

## GSuite Compliance

Qualys SaaS DR now offers compliance assessment using the out-of-box controls for GSuite. A new policy 'G-Suite Best practices' is also added to the library.

## Edit Connector Options

Following fields of different connectors are now made editable:

- Office365 - Description, Application ID, Application Key, Function Name, Function Key
- Salesforce - Description, Application Key
- GSuite - Description, Service Account Id, Private Key ID, Private Key
- Zoom - Description, Application Key
- Slack - Description, Application Key

## Changes on Monitor Tab

Compliance posture of controls is now clearly shown on the **Monitor > Controls** tab. Every row depicts the aggregated posture of a control. You can view the itemized posture evaluation of each resource like users, access groups, and so on by clicking on each posture.

## Removing Events Tab

With this release, we are removing the Events sub-tab from under the Monitor tab to address a few bugs and improve performance. We plan to re-release it later with improved performance.

## Minor UI Changes

- Connector Type is now renamed as 'SaaS'.
- Connector Name is renamed as 'connector' on every SaaS DR screen.

## Bug Fixes

- CID 9008: Changes are made in the assessment logic and in the remediation steps.
