

Qualys Unified Dashboard v1.x

Release Notes

Version 1.3.0

December 23, 2022 (Updated on January 23, 2023)

Here's what's new in Qualys Unified Dashboard 1.3.0!

[Version History for Dashboards](#)

Version History for Dashboards

With this release, we have introduced the **Version History** feature to restore previous versions of your dashboards. You need to edit and save your dashboard to view the version history of that dashboard.

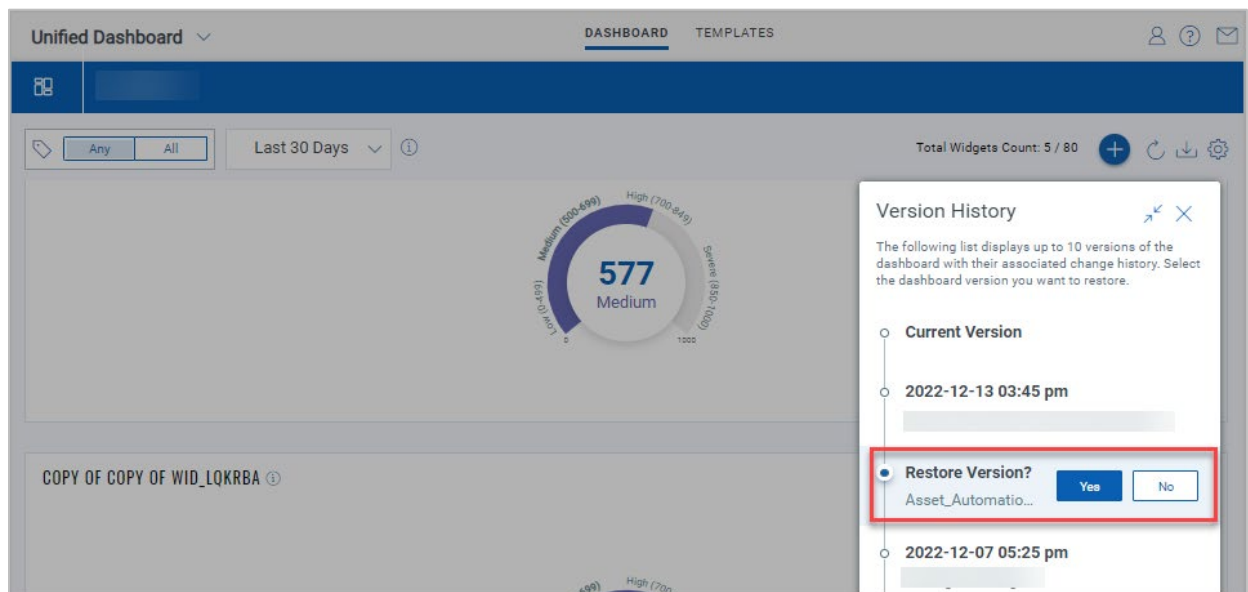

A dashboard preview is displayed while you select between the dashboard versions. The dashboard preview lets you differentiate and identify the changes done in each version. A dashboard version is created in the following scenarios:

- change in dashboard name and description
- change in dashboard layout
- update in tags

Note: If the **Current Version** of the dashboard is pinned or Set as Default, and if you restore a dashboard (not pinned or Set as Default), you need to **Pin** or mark the dashboard as **Set as Default**.

Perform the following steps to restore a dashboard using the Version History option:

1. From the **Dashboard** tab, click the Tools  menu and click **Version History**.
2. Click the dashboard version you want to restore.
3. Click **Restore**.
4. Click **Yes** to restore the dashboard version.

The following example notification confirms that the selected dashboard version is restored.
