## Release Notes

Version 1.8
September 27, 2023

## What's New

Enhanced Dashboard Reports

Qualys Unified Dashboard 1.8 brings you many more improvements and updates! Learn more

## Enhanced Dashboard Reports

With this release, we have enhanced the visual representation of the Dashboard reports generated in PDF format. We have made the following enhancements:

- TruRisk Summary card
- Count and Average function type for Regular Widget Representation. You can create reports using the option **Compare with another reference query**.

The screenshot displays a sample dashboard report of **TruRisk Summary** and **Compare with another reference query** option:

## Issues Addressed

- We have added the QQL option `**Backdoors and trojan horses**` in the vulnerabilities.vulnerability.category token for the default template Assets with Backdoors or Trojan Horses.

- Previously, user was unable to edit a query that included brackets, and the cursor would not move within the query. We have now fixed the issue, and the user can edit the query and move the cursor within the query.
